

# National Information Assurance Partnership Common Criteria Evaluation and Validation Scheme

## **Addendum to Validation Report for the Trellix Endpoint Security (HX) Agent, Version 35.31.31**

### **To whom it may concern:**

The validation for VID 11415 completed on May 29 with one outstanding vulnerability that had been patched in an internal version that was in the corporate process for release the following week. The AVA analysis confirmed the internal version patched the vulnerability, and regression testing confirmed that the validation testing remained valid. The documentation was updated upon public release to reflect the updated version that contained the mitigation.
