VpnService

[Kotlin](#) (/reference/kotlin/android/net/VpnService) | **Java**

```
public class VpnService  
    extends Service (/reference/android/app/Service)
```

[java.lang.Object](#) (/reference/java/lang/Object)

↳ [android.content.Context](#) (/reference/android/content/Context)

↳ [android.content.ContextWrapper](#) (/reference/android/content/ContextWrapper)

↳ [android.app.Service](#) (/reference/android/app/Service)

↳ android.net.VpnService

VpnService is a base class for applications to extend and build their own VPN solutions. In general, it creates a virtual network interface, configures addresses and routing rules, and returns a file descriptor to the application. Each read from the descriptor retrieves an outgoing packet which was routed to the interface. Each write to the descriptor injects an incoming packet just like it was received from the interface. The interface is running on Internet Protocol (IP), so packets are always started with IP headers. The application then completes a VPN connection by processing and exchanging packets with the remote server over a tunnel.

Letting applications intercept packets raises huge security concerns. A VPN application can easily break the network. Besides, two of them may conflict with each other. The system takes several actions to address these issues. Here are some key points:

- User action is required the first time an application creates a VPN connection.
- There can be only one VPN connection running at the same time. The existing interface is deactivated when a new one is created.
- A system-managed notification is shown during the lifetime of a VPN connection.

- A system-managed dialog gives the information of the current VPN connection. It also provides a button to disconnect.
- The network is restored automatically when the file descriptor is closed. It also covers the cases when a VPN application is crashed or killed by the system.

There are two primary methods in this class: `prepare(Context)` ([/reference/android/net/VpnService#prepare\(android.content.Context\)](#)) and `Builder#establish` ([/reference/android/net/VpnService.Builder#establish\(\)](#)). The former deals with user action and stops the VPN connection created by another application. The latter creates a VPN interface using the parameters supplied to the `Builder` ([/reference/android/net/VpnService.Builder](#)). An application must call `prepare(Context)` ([/reference/android/net/VpnService#prepare\(android.content.Context\)](#)) to grant the right to use other methods in this class, and the right can be revoked at any time. Here are the general steps to create a VPN connection:

1. When the user presses the button to connect, call `prepare(Context)` ([/reference/android/net/VpnService#prepare\(android.content.Context\)](#)) and launch the returned intent, if non-null.
2. When the application becomes prepared, start the service.
3. Create a tunnel to the remote server and negotiate the network parameters for the VPN connection.
4. Supply those parameters to a `Builder` ([/reference/android/net/VpnService.Builder](#)) and create a VPN interface by calling `Builder#establish` ([/reference/android/net/VpnService.Builder#establish\(\)](#)).
5. Process and exchange packets between the tunnel and the returned file descriptor.
6. When `onRevoke()` ([/reference/android/net/VpnService#onRevoke\(\)](#)) is invoked, close the file descriptor and shut down the tunnel gracefully.

Services extending this class need to be declared with an appropriate permission and intent filter. Their access must be secured by `Manifest.permission.BIND_VPN_SERVICE` ([/reference/android/Manifest.permission#BIND_VPN_SERVICE](#)) permission, and their intent filter must match `SERVICE_INTERFACE` ([/reference/android/net/VpnService#SERVICE_INTERFACE](#)) action. Here is an example of declaring a VPN service in `AndroidManifest.xml`:

```
<service android:name=".ExampleVpnService"
    android:permission="android.permission.BIND_VPN_SERVICE">
```

```
<intent-filter>
    <action android:name="android.net.VpnService" />
</intent-filter>
</service>
```

The Android system starts a VPN in the background by calling [startService\(\)](#) ([/reference/android/content/Context#startService\(android.content.Intent\)](/reference/android/content/Context#startService(android.content.Intent))). In Android 8.0 (API level 26) and higher, the system places VPN apps on the temporary allowlist for a short period so the app can start in the background. The VPN app must promote itself to the foreground after it's launched or the system will shut down the app.

Developer's guide

To learn more about developing VPN apps, read the [VPN developer's guide](#) (</guide/topics/connectivity/vpn>).

[VpnService.Builder](#) (</reference/android/net/VpnService.Builder>)

Summary

Nested classes

class	VpnService.Builder (/reference/android/net/VpnService.Builder)
	Helper class to create a VPN interface.

Constants

String (/reference/java/lang/String)	SERVICE_INTERFACE (/reference/android/net/VpnService#SERVICE_INTENT)
	The action must be matched by the intent filter of this service.

String (/reference/java/lang/String)	<u>SERVICE_META_DATA_SUPPORTS_ALWAYS_ON</u> (/reference/android/net/VpnService#SERVICE_META_DATA_SUPPORTS_
	Key for boolean meta-data field indicating whether this VpnService supp on mode.

Inherited constants

From class [android.app.Service](/reference/android/app/Service) (/reference/android/app/Service)

int	<u>START_CONTINUATION_MASK</u> (/reference/android/app/Service#START
	Bits returned by <u>onStartCommand(Intent, int, int)</u> (/reference
int	<u>START_FLAG_REDELIVERY</u> (/reference/android/app/Service#START_F
	This flag is set in <u>onStartCommand(Intent, int, int)</u> (/reference service had previously returned <u>START_REDELIVER_INTENT</u> (/referen that Intent.
int	<u>START_FLAG_RETRY</u> (/reference/android/app/Service#START_FLAG_R
	This flag is set in <u>onStartCommand(Intent, int, int)</u> (/reference from <u>onStartCommand(android.content.Intent, int, int)</u> (/
int	<u>START_NOT_STICKY</u> (/reference/android/app/Service#START_NOT_ST
	Constant to return from <u>onStartCommand(Intent, int, int)</u> (/re from <u>onStartCommand(Intent, int, int)</u> (/reference/android/ap started state and don't recreate until a future explicit call to <u>Context</u> .
int	<u>START_REDELIVER_INTENT</u> (/reference/android/app/Service#START_
	Constant to return from <u>onStartCommand(Intent, int, int)</u> (/re from <u>onStartCommand(Intent, int, int)</u> (/reference/android/ap again via <u>onStartCommand(Intent, int, int)</u> (/reference/androi
int	<u>START_STICKY</u> (/reference/android/app/Service#START_STICKY)

Constant to return from `onStartCommand(Intent, int, int)` (/reference/android/app/Service#START_STICKY_COMPATIBILITY) (/reference/android/app/Service#START_STICKY_COMPATIBILITY) (/reference/android/ap

int

START_STICKY_COMPATIBILITY (/reference/android/app/Service#START_STICKY_COMPATIBILITY)

Constant to return from `onStartCommand(Intent, int, int)` (/reference/android/app/Service#START_STICKY_COMPATIBILITY) that does not guarar again after being killed.

int

STOP_FOREGROUND_DETACH (/reference/android/app/Service#STOP_FOREGROUND_DETACH)

Selector for `stopForeground(int)` (/reference/android/app/Service#stopForeground(int)) (/reference/android/app/Service#startForeground(int,%20android.app

int

STOP_FOREGROUND_LEGACY (/reference/android/app/Service#STOP_FOREGROUND_LEGACY)

*This constant was deprecated in API level 33. Use **STOP_FOREGROUND_UNPREDICTABLE_RESULTS** for unpredictable results.*

int

STOP_FOREGROUND_REMOVE (/reference/android/app/Service#STOP_FOREGROUND_REMOVE)

Selector for `stopForeground(int)` (/reference/android/app/Service#stopForeground(int)) (/reference/android/app/Service#startForeground(int,%20android.app

From class [android.content.Context](/reference/android/content/Context) (/reference/android/content/Context)

String (/reference/java/lang/String) **ACCESSIBILITY_SERVICE** (/reference/android/content/Context#ACCESSIBILITY_SERVICE)

Use with `getSystemService(java.lang.String)` (/reference/android/view/accessibility/AccessibilityManager) for giving

String (/reference/java/lang/String) **ACCOUNT_SERVICE** (/reference/android/content/Context#ACCOUNT_SERVICE)

Use with `getSystemService(java.lang.String)` (/reference/android/content/Context) to get intents at a time of your choosing.

String (/reference/java/lang/String) **ACTIVITY_SERVICE** (/reference/android/content/Context#ACTIVITY_SERVICE)

Use with `getSystemService(java.lang.String)` (/reference/android/content/Context) to get the global system state.

String (/reference/java/lang/String) **ALARM_SERVICE** (/reference/android/content/Context#ALARM_SERVICE)

Use with [getSystemService\(java.lang.String\)](#) (/reference/a time of your choosing.

String (/reference/java/lang/String) **APPWIDGET_SERVICE** (/reference/android/content/Context#APPWI

Use with [getSystemService\(java.lang.String\)](#) (/reference/a accessing AppWidgets.

String (/reference/java/lang/String) **APP_OPS_SERVICE** (/reference/android/content/Context#APP_OPS_

Use with [getSystemService\(java.lang.String\)](#) (/reference/a application operations on the device.

String (/reference/java/lang/String) **APP_SEARCH_SERVICE** (/reference/android/content/Context#APP_

Use with [getSystemService\(java.lang.String\)](#) (/reference/a indexing and querying app data managed by the system.

String (/reference/java/lang/String) **AUDIO_SERVICE** (/reference/android/content/Context#AUDIO_SERV

Use with [getSystemService\(java.lang.String\)](#) (/reference/a management of volume, ringer modes and audio routing.

String (/reference/java/lang/String) **BATTERY_SERVICE** (/reference/android/content/Context#BATTERY_

Use with [getSystemService\(java.lang.String\)](#) (/reference/a state.

int

BIND_ABOVE_CLIENT (/reference/android/content/Context#BIND_

Flag for [bindService\(Intent, BindServiceFlags, Execute](#) (/reference/android/content/Context#bindService(android.content.I application binding to this service considers the service to be more

int

BIND_ADJUST_WITH_ACTIVITY (/reference/android/content/Conte

Flag for [bindService\(Intent, BindServiceFlags, Execute](#) (/reference/android/content/Context#bindService(android.content.I allow the target service's process importance to be raised based or to impact it.

int

BIND_ALLOW_ACTIVITY_STARTS (/reference/android/content/Con

Flag for `bindService(Intent, BindServiceFlags, Executor)` (/reference/android/content/Context#bindService(android.content.Context, Intent, BindServiceFlags, Executor)). If the service is visible, the bound service is allowed to start an activity from back

int

BIND_ALLOW_OOM_MANAGEMENT (/reference/android/content/Context#BIND_ALLOW_OOM_MANAGEMENT)

Flag for `bindService(Intent, BindServiceFlags, Executor)` (/reference/android/content/Context#bindService(android.content.Context, Intent, BindServiceFlags, Executor)). Allows the bound service to go through its normal memory management.

int

BIND_AUTO_CREATE (/reference/android/content/Context#BIND_AUTO_CREATE)

Flag for `bindService(Intent, BindServiceFlags, Executor)` (/reference/android/content/Context#bindService(android.content.Context, Intent, BindServiceFlags, Executor)). Allows the service as long as the binding exists.

int

BIND_DEBUG_UNBIND (/reference/android/content/Context#BIND_DEBUG_UNBIND)

Flag for `bindService(Intent, BindServiceFlags, Executor)` (/reference/android/content/Context#bindService(android.content.Context, Intent, BindServiceFlags, Executor)). Allows mismatched calls to unbind.

int

BIND_EXTERNAL_SERVICE (/reference/android/content/Context#BIND_EXTERNAL_SERVICE)

Flag for `bindService(Intent, BindServiceFlags, Executor)` (/reference/android/content/Context#bindService(android.content.Context, Intent, BindServiceFlags, Executor)). Allows an `isolated` (/reference/android/R.attr#isolatedProcess), `external`

long

BIND_EXTERNAL_SERVICE_LONG (/reference/android/content/Context#BIND_EXTERNAL_SERVICE_LONG)

Works in the same way as `BIND_EXTERNAL_SERVICE` (/reference/android/content/Context#BIND_EXTERNAL_SERVICE) (/reference/android/content/Context.BindServiceFlags).

int

BIND_IMPORTANT (/reference/android/content/Context#BIND_IMPORTANT)

Flag for `bindService(Intent, BindServiceFlags, Executor)` (/reference/android/content/Context#bindService(android.content.Context, Intent, BindServiceFlags, Executor)). Indicates the service is important to the client, so should be brought to the foreground process.

int

BIND_INCLUDE_CAPABILITIES (/reference/android/content/Context#BIND_INCLUDE_CAPABILITIES)

Flag for [bindService\(Intent, BindServiceFlags, Executor\)](#) (/reference/android/content/Context#bindService(android.content.Context, Intent, BindServiceFlags, Executor)) has specific capabilities due to its foreground state such as an active foreground service.

int

BIND_NOT_FOREGROUND (/reference/android/content/Context#BIND_NOT_FOREGROUND)

Flag for [bindService\(Intent, BindServiceFlags, Executor\)](#) (/reference/android/content/Context#bindService(android.content.Context, Intent, BindServiceFlags, Executor)) raise the target service's process to the foreground scheduling priority.

int

BIND_NOT_PERCEPTIBLE (/reference/android/content/Context#BIND_NOT_PERCEPTIBLE)

Flag for [bindService\(Intent, BindServiceFlags, Executor\)](#) (/reference/android/content/Context#bindService(android.content.Context, Intent, BindServiceFlags, Executor)) is visible or user-perceptible, lower the target service's importance.

int

BIND_SHARED_ISOLATED_PROCESS (/reference/android/content/Context#BIND_SHARED_ISOLATED_PROCESS)

Flag for [bindIsolatedService\(Intent, BindServiceFlags, Executor\)](#) (/reference/android/content/Context#bindIsolatedService(android.content.Context, Intent, BindServiceFlags, Executor)) : Bind the service into a shared isolated process.

int

BIND_WAIVE_PRIORITY (/reference/android/content/Context#BIND_WAIVE_PRIORITY)

Flag for [bindService\(Intent, BindServiceFlags, Executor\)](#) (/reference/android/content/Context#bindService(android.content.Context, Intent, BindServiceFlags, Executor)) scheduling or memory management priority of the target service's process.

String (/reference/java/lang/String)

BIOMETRIC_SERVICE (/reference/android/content/Context#BIOMETRIC_SERVICE)

Use with [getSystemService\(java.lang.String\)](#) (/reference/android/os/Context#getSystemService(java.lang.String)) for handling biometric and PIN/pattern/password authentication.

String (/reference/java/lang/String)

BLOB_STORE_SERVICE (/reference/android/content/Context#BLOB_STORE_SERVICE)

Use with [getSystemService\(java.lang.String\)](#) (/reference/android/os/Context#getSystemService(java.lang.String)) contributing and accessing data blobs from the blob store maintained by the system.

String (/reference/java/lang/String)

BLUETOOTH_SERVICE (/reference/android/content/Context#BLUETOOTH_SERVICE)

Use with [getSystemService\(java.lang.String\)](#) (/reference/android/os/Context#getSystemService(java.lang.String)) Bluetooth.

String (/reference/java/lang/String) **BUGREPORT_SERVICE** (/reference/android/content/Context#BUGRE
Service to capture a bugreport.

String (/reference/java/lang/String) **CAMERA_SERVICE** (/reference/android/content/Context#CAMERA_Σ
Use with **getSystemService(java.lang.String)** (/reference/a
interacting with camera devices.

String (/reference/java/lang/String) **CAPTIONING_SERVICE** (/reference/android/content/Context#CAPT
Use with **getSystemService(java.lang.String)** (/reference/a
for obtaining captioning properties and listening for changes in cap

String (/reference/java/lang/String) **CARRIER_CONFIG_SERVICE** (/reference/android/content/Context#
Use with **getSystemService(java.lang.String)** (/reference/a
for reading carrier configuration values.

String (/reference/java/lang/String) **CLIPBOARD_SERVICE** (/reference/android/content/Context#CLIPBC
Use with **getSystemService(java.lang.String)** (/reference/a
accessing and modifying the contents of the global clipboard.

String (/reference/java/lang/String) **COMPANION_DEVICE_SERVICE** (/reference/android/content/Contex
Use with **getSystemService(java.lang.String)** (/reference/a
(/reference/android/companion/CompanionDeviceManager) for mai

String (/reference/java/lang/String) **CONNECTIVITY_DIAGNOSTICS_SERVICE** (/reference/android/cont
Use with **getSystemService(java.lang.String)** (/reference/a
(/reference/android/net/ConnectivityDiagnosticsManager) for perfc

String (/reference/java/lang/String) **CONNECTIVITY_SERVICE** (/reference/android/content/Context#CC
Use with **getSystemService(java.lang.String)** (/reference/a
handling management of network connections.

String (/reference/java/lang/String) **CONSUMER_IR_SERVICE** (/reference/android/content/Context#CON

Use with [getSystemService\(java.lang.String\)](#) (/reference/a transmitting infrared signals from the device.

[String](#) (/reference/java/lang/String) [CONTACT_KEYS_SERVICE](#) (/reference/android/content/Context#CC

Use with [getSystemService\(java.lang.String\)](#) (/reference/a (/reference/android/provider/E2eeContactKeysManager) to managi

int [CONTEXT_IGNORE_SECURITY](#) (/reference/android/content/Context:

Flag for use with [createPackageContext\(String, int\)](#) (/refer to always be loaded.

int [CONTEXT_INCLUDE_CODE](#) (/reference/android/content/Context#CC

Flag for use with [createPackageContext\(String, int\)](#) (/refer

int [CONTEXT_RESTRICTED](#) (/reference/android/content/Context#CONI

Flag for use with [createPackageContext\(String, int\)](#) (/refer

[String](#) (/reference/java/lang/String) [CREDENTIAL_SERVICE](#) (/reference/android/content/Context#CRED

Use with [getSystemService\(java.lang.String\)](#) (/reference/a authenticate a user to your app.

[String](#) (/reference/java/lang/String) [CROSS_PROFILE_APPS_SERVICE](#) (/reference/android/content/Con

Use with [getSystemService\(java.lang.String\)](#) (/reference/a profile operations.

int [DEVICE_ID_DEFAULT](#) (/reference/android/content/Context#DEVICI

The default device ID, which is the ID of the primary (non-virtual) de

int [DEVICE_ID_INVALID](#) (/reference/android/content/Context#DEVICI

Invalid device ID.

[String](#) (/reference/java/lang/String) [DEVICE_LOCK_SERVICE](#) (/reference/android/content/Context#DEV

Use with [getSystemService\(java.lang.String\)](#) (/reference/a

[String](#) (/reference/java/lang/String) [DEVICE_POLICY_SERVICE](#) (/reference/android/content/Context#D

Use with [getSystemService\(java.lang.String\)](#) (/reference/a
working with global device policy management.

[String](#) (/reference/java/lang/String) [DISPLAY_HASH_SERVICE](#) (/reference/android/content/Context#DIS

Use with [getSystemService\(java.lang.String\)](#) (/reference/a
to handle display hashes.

[String](#) (/reference/java/lang/String) [DISPLAY_SERVICE](#) (/reference/android/content/Context#DISPLAY_

Use with [getSystemService\(java.lang.String\)](#) (/reference/a
interacting with display devices.

[String](#) (/reference/java/lang/String) [DOMAIN_VERIFICATION_SERVICE](#) (/reference/android/content/Co

Use with [getSystemService\(java.lang.String\)](#) (/reference/a
(/reference/android/content/pm/verify/domain/DomainVerificationM

[String](#) (/reference/java/lang/String) [DOWNLOAD_SERVICE](#) (/reference/android/content/Context#DOWNL

Use with [getSystemService\(java.lang.String\)](#) (/reference/a
HTTP downloads.

[String](#) (/reference/java/lang/String) [DROPBOX_SERVICE](#) (/reference/android/content/Context#DROPBO)

Use with [getSystemService\(java.lang.String\)](#) (/reference/a
recording diagnostic logs.

[String](#) (/reference/java/lang/String) [EUICC_SERVICE](#) (/reference/android/content/Context#EUICC_SERV

Use with [getSystemService\(java.lang.String\)](#) (/reference/a
the device eUICC (embedded SIM).

[String](#) (/reference/java/lang/String) [FILE_INTEGRITY_SERVICE](#) (/reference/android/content/Context#

Use with [getSystemService\(java.lang.String\)](#) (/reference/a

String (/reference/java/lang/String) **FINGERPRINT_SERVICE** (/reference/android/content/Context#FINC

Use with **getSystemService(java.lang.String)** (/reference/a
(/reference/android/hardware/fingerprint/FingerprintManager) for h

String (/reference/java/lang/String) **GAME_SERVICE** (/reference/android/content/Context#GAME_SERVIA

Use with **getSystemService(java.lang.String)** (/reference/a

String (/reference/java/lang/String) **GRAMMATICAL_INFLECTION_SERVICE** (/reference/android/content

Use with **getSystemService(java.lang.String)** (/reference/a
(/reference/android/app/GrammaticalInflectionManager).

String (/reference/java/lang/String) **HARDWARE_PROPERTIES_SERVICE** (/reference/android/content/Co

Use with **getSystemService(java.lang.String)** (/reference/a
(/reference/android/os/HardwarePropertiesManager) for accessing

String (/reference/java/lang/String) **HEALTHCONNECT_SERVICE** (/reference/android/content/Context#H

Use with **getSystemService(java.lang.String)** (/reference/a
(/reference/android/health/connect/HealthConnectManager).

String (/reference/java/lang/String) **INPUT_METHOD_SERVICE** (/reference/android/content/Context#INF

Use with **getSystemService(java.lang.String)** (/reference/a
(/reference/android/view/inputmethod/InputMethodManager) for ac

String (/reference/java/lang/String) **INPUT_SERVICE** (/reference/android/content/Context#INPUT_SERV

Use with **getSystemService(java.lang.String)** (/reference/a
with input devices.

*This constant was deprecated in API level 17. Creating world-writable mechanism for interactions such as **ContentProvider** (/reference/ There are no guarantees that this access mode will remain on a file,*

String (/reference/java/lang/String)

NETWORK_STATS_SERVICE (/reference/android/content/Context#N

Use with **getSystemService(java.lang.String)** (/reference/a for querying network usage stats.

String (/reference/java/lang/String)

NFC_SERVICE (/reference/android/content/Context#NFC_SERVICE)

Use with **getSystemService(java.lang.String)** (/reference/a

String (/reference/java/lang/String)

NOTIFICATION_SERVICE (/reference/android/content/Context#NC

Use with **getSystemService(java.lang.String)** (/reference/a informing the user of background events.

String (/reference/java/lang/String)

NSD_SERVICE (/reference/android/content/Context#NSD_SERVICE)

Use with **getSystemService(java.lang.String)** (/reference/a of network service discovery

String (/reference/java/lang/String)

OVERLAY_SERVICE (/reference/android/content/Context#OVERLAY

Use with **getSystemService(java.lang.String)** (/reference/a overlay packages.

String (/reference/java/lang/String)

PEOPLE_SERVICE (/reference/android/content/Context#PEOPLE_S

Use with **getSystemService(java.lang.String)** (/reference/a your published conversations.

String (/reference/java/lang/String)

PERFORMANCE_HINT_SERVICE (/reference/android/content/Contex

Use with **getSystemService(java.lang.String)** (/reference/a accessing the performance hinting service.

String (/reference/java/lang/String) **POWER_SERVICE** (/reference/android/content/Context#POWER_SEF

Use with **getSystemService(java.lang.String)** (/reference/a management, including "wake locks," which let you keep the device

String (/reference/java/lang/String) **PRINT_SERVICE** (/reference/android/content/Context#PRINT_SERV

PrintManager (/reference/android/print/PrintManager) for printing

String (/reference/java/lang/String) **PROFILING_SERVICE** (/reference/android/content/Context#PROFIL

Use with **getSystemService(java.lang.String)** (/reference/a

int

RECEIVER_EXPORTED (/reference/android/content/Context#RECEIV

Flag for **registerReceiver(BroadcastReceiver, IntentFil** broadcasts from other Apps.

int

RECEIVER_NOT_EXPORTED (/reference/android/content/Context#R

Flag for **registerReceiver(BroadcastReceiver, IntentFil** receive broadcasts from other Apps.

int

RECEIVER_VISIBLE_TO_INSTANT_APPS (/reference/android/cont

Flag for **registerReceiver(BroadcastReceiver, IntentFil** broadcasts from Instant Apps.

String (/reference/java/lang/String) **RESTRICTIONS_SERVICE** (/reference/android/content/Context#RE:

Use with **getSystemService(java.lang.String)** (/reference/a retrieving application restrictions and requesting permissions for re:

String (/reference/java/lang/String) **ROLE_SERVICE** (/reference/android/content/Context#ROLE_SERVIC

Use with **getSystemService(java.lang.String)** (/reference/a

String (/reference/java/lang/String) **SEARCH_SERVICE** (/reference/android/content/Context#SEARCH_S

Use with **getSystemService(java.lang.String)** (/reference/a

String (/reference/java/lang/String) **SECURITY_STATE_SERVICE** (/reference/android/content/Context#SECURITY_STATE_SERVICE)
Use with **getSystemService(java.lang.String)** (/reference/android/content/Context#getSystemService) accessing the security state manager service.

String (/reference/java/lang/String) **SENSOR_SERVICE** (/reference/android/content/Context#SENSOR_SERVICE)
Use with **getSystemService(java.lang.String)** (/reference/android/content/Context#getSystemService) accessing sensors.

String (/reference/java/lang/String) **SHORTCUT_SERVICE** (/reference/android/content/Context#SHORTCUT_SERVICE)
Use with **getSystemService(java.lang.String)** (/reference/android/content/Context#getSystemService) accessing the launcher shortcut service.

String (/reference/java/lang/String) **STATUS_BAR_SERVICE** (/reference/android/content/Context#STATUS_BAR_SERVICE)
Use with **getSystemService(java.lang.String)** (/reference/android/content/Context#getSystemService) with the status bar and quick settings.

String (/reference/java/lang/String) **STORAGE_SERVICE** (/reference/android/content/Context#STORAGE_SERVICE)
Use with **getSystemService(java.lang.String)** (/reference/android/content/Context#getSystemService) system storage functions.

String (/reference/java/lang/String) **STORAGE_STATS_SERVICE** (/reference/android/content/Context#STORAGE_STATS_SERVICE)
Use with **getSystemService(java.lang.String)** (/reference/android/content/Context#getSystemService) accessing system storage statistics.

String (/reference/java/lang/String) **SYSTEM_HEALTH_SERVICE** (/reference/android/content/Context#SYSTEM_HEALTH_SERVICE)
Use with **getSystemService(java.lang.String)** (/reference/android/content/Context#getSystemService) accessing system health (battery, power, memory, etc) metrics.

String (/reference/java/lang/String) **TELECOM_SERVICE** (/reference/android/content/Context#TELECOM_SERVICE)
Use with **getSystemService(java.lang.String)** (/reference/android/content/Context#getSystemService) telecom-related features of the device.

String (/reference/java/lang/String) **TELEPHONY_IMS_SERVICE** (/reference/android/content/Context#TELEPHONY_IMS_SERVICE)

Use with [getSystemService\(java.lang.String\)](#) (/reference/a

[String](#) (/reference/java/lang/String) [TELEPHONY_SERVICE](#) (/reference/android/content/Context#TELEPI

Use with [getSystemService\(java.lang.String\)](#) (/reference/a handling management the telephony features of the device.

[String](#) (/reference/java/lang/String) [TELEPHONY_SUBSCRIPTION_SERVICE](#) (/reference/android/content

Use with [getSystemService\(java.lang.String\)](#) (/reference/a handling management the telephony subscriptions of the device.

[String](#) (/reference/java/lang/String) [TEXT_CLASSIFICATION_SERVICE](#) (/reference/android/content/Co

Use with [getSystemService\(java.lang.String\)](#) (/reference/a (/reference/android/view/textclassifier/TextClassificationManager) f

[String](#) (/reference/java/lang/String) [TEXT_SERVICES_MANAGER_SERVICE](#) (/reference/android/content/

Use with [getSystemService\(java.lang.String\)](#) (/reference/a (/reference/android/view/textservice/TextServicesManager) for acc

[String](#) (/reference/java/lang/String) [TV_INPUT_SERVICE](#) (/reference/android/content/Context#TV_INPU

Use with [getSystemService\(java.lang.String\)](#) (/reference/a with TV inputs on the device.

[String](#) (/reference/java/lang/String) [TV_INTERACTIVE_APP_SERVICE](#) (/reference/android/content/Con

Use with [getSystemService\(java.lang.String\)](#) (/reference/a (/reference/android/media/tv/interactive/TvInteractiveAppManager)

[String](#) (/reference/java/lang/String) [UI_MODE_SERVICE](#) (/reference/android/content/Context#UI_MODE

Use with [getSystemService\(java.lang.String\)](#) (/reference/a modes.

[String](#) (/reference/java/lang/String) [USAGE_STATS_SERVICE](#) (/reference/android/content/Context#USA

Use with [getSystemService\(java.lang.String\)](#) (/reference/a querying device usage stats.

String (/reference/java/lang/String) **USB_SERVICE** (/reference/android/content/Context#USB_SERVICE)

Use with **getSystemService(java.lang.String)** (/reference/android/content/Context#getSystemService(java.lang.String)) on devices (as a USB host) and for controlling this device's behavior as

String (/reference/java/lang/String) **USER_SERVICE** (/reference/android/content/Context#USER_SERVICE)

Use with **getSystemService(java.lang.String)** (/reference/android/content/Context#getSystemService(java.lang.String)) on devices that support multiple users.

String (/reference/java/lang/String) **VIBRATOR_MANAGER_SERVICE** (/reference/android/content/Context#VIBRATOR_MANAGER_SERVICE)

Use with **getSystemService(java.lang.String)** (/reference/android/content/Context#getSystemService(java.lang.String)) on device vibrators, interacting with individual ones and playing synchronously.

String (/reference/java/lang/String) **VIBRATOR_SERVICE** (/reference/android/content/Context#VIBRATOR_SERVICE)

*This constant was deprecated in API level 31. Use **VibratorManager**.*

String (/reference/java/lang/String) **VIRTUAL_DEVICE_SERVICE** (/reference/android/content/Context#VIRTUAL_DEVICE_SERVICE)

Use with **getSystemService(java.lang.String)** (/reference/android/content/Context#getSystemService(java.lang.String)) on devices (reference/android/companion/virtual/VirtualDeviceManager) for managing virtual devices.

String (/reference/java/lang/String) **VPN_MANAGEMENT_SERVICE** (/reference/android/content/Context#VPN_MANAGEMENT_SERVICE)

Use with **getSystemService(java.lang.String)** (/reference/android/content/Context#getSystemService(java.lang.String)) on platform built-in VPN.

String (/reference/java/lang/String) **WALLPAPER_SERVICE** (/reference/android/content/Context#WALLPAPER_SERVICE)

Use with **getSystemService(java.lang.String)** (/reference/android/content/Context#getSystemService(java.lang.String)) on devices.

String (/reference/java/lang/String) **WIFI_AWARE_SERVICE** (/reference/android/content/Context#WIFI_AWARE_SERVICE)

Use with **getSystemService(java.lang.String)** (/reference/android/content/Context#getSystemService(java.lang.String)) on devices for handling management of Wi-Fi Aware.

String (/reference/java/lang/String) **WIFI_P2P_SERVICE** (/reference/android/content/Context#WIFI_P2P_SERVICE)

Use with [getSystemService\(java.lang.String\)](#) (/reference/a management of Wi-Fi peer-to-peer connections.

[String](#) (/reference/java/lang/String) [WIFI_RTT_RANGING_SERVICE](#) (/reference/android/content/Context

Use with [getSystemService\(java.lang.String\)](#) (/reference/a devices with wifi.

[String](#) (/reference/java/lang/String) [WIFI_SERVICE](#) (/reference/android/content/Context#WIFI_SERVICE

Use with [getSystemService\(java.lang.String\)](#) (/reference/a of Wi-Fi access.

[String](#) (/reference/java/lang/String) [WINDOW_SERVICE](#) (/reference/android/content/Context#WINDOW_

Use with [getSystemService\(java.lang.String\)](#) (/reference/a system's window manager.

Public constructors

[VpnService](/reference/android/net/VpnService#VpnService()) (/reference/android/net/VpnService#VpnService())()

Public methods

final boolean	isAlwaysOn (/reference/android/net/VpnService#isAlwaysOn())() Returns whether the service is running in always-on VPN mode.
----------------------	---

final boolean	isLockdownEnabled (/reference/android/net/VpnService#isLockdownEnabled) Returns whether the service is running in always-on VPN lockdown mode.
----------------------	---

IBinder (/reference/android/os/IBinder)	onBind (/reference/android/net/VpnService#onBind(android.content.Intent))(Intent (/reference/android/content/Intent) intent) Return the communication interface to the service.
---	---

void	onRevoke (/reference/android/net/VpnService#onRevoke())() Invoked when the application is revoked.
-------------	--

static Intent (/reference/android/content/Intent)	prepare (/reference/android/net/VpnService#prepare(android.content.Context))(Context (/reference/android/content/Context) context) Prepare to establish a VPN connection.
---	--

boolean **protect** (/reference/android/net/VpnService#protect(java.net.Socket) (/reference/java/net/Socket) **socket**)

Convenience method to protect a **Socket** (/reference/java/net/Socket) connections.

boolean **protect** (/reference/android/net/VpnService#protect(int))(int **sock**

Protect a socket from VPN connections.

boolean **protect** (/reference/android/net/VpnService#protect(java.net.DatagramSocket) (**DatagramSocket** (/reference/java/net/DatagramSocket) **socket**)

Convenience method to protect a **DatagramSocket** (/reference/java/net/DatagramSocket) from VPN connections.

boolean **setUnderlyingNetworks**
(/reference/android/net/VpnService#setUnderlyingNetworks(android.net.Network[]) (/reference/android/net/Network) **networks**)

Sets the underlying networks used by the VPN for its upstream connections.

Inherited methods

From class [android.app.Service](#) (/reference/android/app/Service)

void **attachBaseContext** (/reference/android/app/Service#attachBaseContext(Context))

Set the base context for this ContextWrapper.

void **dump** (/reference/android/app/Service#dump(PrintWriter))

Print the Service's state into the given stream.

final Application (/reference/android/app/Application) **getApplication** (/reference/android/app/Service#getApplication())

Return the application that owns this service.

Constants

SERVICE_INTERFACE Added in [API level 14](/guide/topics/manifest/uses-sdk-element#ApiLevels) (/guide/topics/manifest/uses-sdk-element#ApiLevels)

```
public static final String (/reference/java/lang/String) SERVICE_INTERFACE
```

The action must be matched by the intent filter of this service. It also needs to require [Manifest.permission.BIND_VPN_SERVICE](/reference/android/Manifest.permission#BIND_VPN_SERVICE) (/reference/android/Manifest.permission#BIND_VPN_SERVICE) permission so that other applications cannot abuse it.

Constant Value: "android.net.VpnService"

SERVICE_META_DATA_SUPPORTS_ALWAYS_ON Added in [API level 24](/guide/topics/manifest/uses-sdk-element#ApiLevels) (/guide/topics/manifest/uses-sdk-element#ApiLevels)

```
public static final String (/reference/java/lang/String) SERVICE_META_DATA_SUPPORTS_ALWA
```

Key for boolean meta-data field indicating whether this VpnService supports always-on mode.

For a VPN app targeting [API 24](/reference/android/os/Build.VERSION_CODES#N) (/reference/android/os/Build.VERSION_CODES#N) or above, Android provides users with the ability to set it as always-on, so that VPN connection is persisted after device reboot and app upgrade. Always-on VPN can also be enabled by device owner and profile owner apps through

[DevicePolicyManager#setAlwaysOnVpnPackage](/reference/android/app/admin/DevicePolicyManager#setAlwaysOnVpnPackage)

(/reference/android/app/admin/DevicePolicyManager#setAlwaysOnVpnPackage(android.content.ComponentName,%20java.lang.String,%20boolean))

VPN apps not supporting this feature should opt out by adding this meta-data field to the [VpnService](#) component of [AndroidManifest.xml](#). In case there is more than one [VpnService](#) component defined in [AndroidManifest.xml](#), opting out any one of them will opt out the entire app. For example,

```
<service android:name=".ExampleVpnService"
    android:permission="android.permission.BIND_VPN_SERVICE">
    <intent-filter>
        <action android:name="android.net.VpnService" />
```

```
</intent-filter>
<meta-data android:name="android.net.VpnService.SUPPORTS_ALWAYS_ON"
            android:value=false/>
</service>
```

This meta-data field defaults to `true` if absent. It will only have effect on [Build.VERSION_CODES.O_MR1](#) ([/reference/android/os/Build.VERSION_CODES#O_MR1](#)) or higher.

Constant Value: "android.net.VpnService.SUPPORTS_ALWAYS_ON"

Public constructors

VpnService

```
public VpnService ()
```

Public methods

isAlwaysOn Added in [API level 29](#) ([/guide/topics/manifest/uses-sdk-element#ApiLevels](#))

```
public final boolean isAlwaysOn ()
```

Returns whether the service is running in always-on VPN mode. In this mode the system ensures that the service is always running by restarting it when necessary, e.g. after reboot.

Returns

boolean

See also:

[DevicePolicyManager.setAlwaysOnVpnPackage\(ComponentName, String, boolean, Set\)](#)

(/reference/android/app/admin/DevicePolicyManager#setAlwaysOnVpnPackage(android.content.ComponentName,%20java.lang.String,%20boolean,%20java.util.Set<java.lang.String>))

isLockdownEnabled Added in [API level 29](#) (/guide/topics/manifest/uses-sdk-element#ApiLevels)

```
public final boolean isLockdownEnabled ()
```

Returns whether the service is running in always-on VPN lockdown mode. In this mode the system ensures that the service is always running and that the apps aren't allowed to bypass the VPN.

Returns

boolean

See also:

[DevicePolicyManager.setAlwaysOnVpnPackage\(ComponentName, String, boolean, Set\)](#)

(/reference/android/app/admin/DevicePolicyManager#setAlwaysOnVpnPackage(android.content.ComponentName,%20java.lang.String,%20boolean,%20java.util.Set<java.lang.String>))

onBind Added in [API level 14](#) (/guide/topics/manifest/uses-sdk-element#ApiLevels)

```
public IBinder (/reference/android/os/IBinder) onBind (Intent (/reference/android/content/Intent))
```

Return the communication interface to the service. This method returns `null` on [Intent](#) (/reference/android/content/Intent)s other than [SERVICE_INTERFACE](#)

[\(/reference/android/net/VpnService#SERVICE_INTERFACE\)](#) action. Applications overriding this method must identify the intent and return the corresponding interface accordingly.

Parameters

intent **Intent:** The Intent that was used to bind to this service, as given to [Context#bindService\(android.content.Intent\)](#). Note that any extras that were included with the Intent at that point will

Returns

[IBinder](#) [\(/reference/android/os/IBinder\)](#) Return an IBinder through which clients can call on to the service.

See also:

[Service.onBind\(Intent\)](#) [\(/reference/android/app/Service#onBind\(android.content.Intent\)\)](#)

onRevoke Added in [API level 14](#) [\(/guide/topics/manifest/uses-sdk-element#ApiLevels\)](#)

```
public void onRevoke ()
```

Invoked when the application is revoked. At this moment, the VPN interface is already deactivated by the system. The application should close the file descriptor and shut down gracefully. The default implementation of this method is calling [Service#stopSelf\(\)](#) [\(/reference/android/app/Service#stopSelf\(\)\)](#).

Calls to this method may not happen on the main thread of the process.

See also:

[`prepare\(Context\)`](/reference/android/net/VpnService#prepare(android.content.Context)) (/reference/android/net/VpnService#prepare(android.content.Context))

prepare

Added in [API level 14](/guide/topics/manifest/uses-sdk-element#ApiLevels) (/guide/topics/manifest/uses-sdk-element#ApiLevels)

```
public static Intent (/reference/android/content/Intent) prepare (Context (/reference/android/c
```

Prepare to establish a VPN connection. This method returns `null` if the VPN application is already prepared or if the user has previously consented to the VPN application. Otherwise, it returns an [`Intent`](/reference/android/content/Intent) (/reference/android/content/Intent) to a system activity. The application should launch the activity using [`Activity#startActivityForResult`](/reference/android/app/Activity#startActivityForResult) (/reference/android/app/Activity#startActivityForResult(android.content.Intent,%20int)) to get itself prepared. The activity may pop up a dialog to require user action, and the result will come back via its [`Activity#onActivityResult`](/reference/android/app/Activity#onActivityResult) (/reference/android/app/Activity#onActivityResult(int,%20int,%20android.content.Intent)). If the result is [`Activity#RESULT_OK`](/reference/android/app/Activity#RESULT_OK) (/reference/android/app/Activity#RESULT_OK), the application becomes prepared and is granted to use other methods in this class.

Only one application can be granted at the same time. The right is revoked when another application is granted. The application losing the right will be notified via its [`onRevoke\(\)`](/reference/android/net/VpnService#onRevoke()) (/reference/android/net/VpnService#onRevoke()). Unless it becomes prepared again, subsequent calls to other methods in this class will fail.

The user may disable the VPN at any time while it is activated, in which case this method will return an intent the next time it is executed to obtain the user's consent again.

Parameters

context	Context
----------------	----------------

Returns

Intent

(/reference/android/content/Intent)

See also:

onRevoke() (/reference/android/net/VpnService#onRevoke())

protect

Added in [API level 14](/guide/topics/manifest/uses-sdk-element#ApiLevels) (/guide/topics/manifest/uses-sdk-element#ApiLevels)

```
public boolean protect (Socket (/reference/java/net/Socket) socket)
```

Convenience method to protect a **Socket** (/reference/java/net/Socket) from VPN connections.

Parameters

socket	Socket
---------------	---------------

Returns

boolean	true on success.
----------------	-------------------------

See also:

protect(int) (/reference/android/net/VpnService#protect(int))

protect

Added in [API level 14](/guide/topics/manifest/uses-sdk-element#ApiLevels) (/guide/topics/manifest/uses-sdk-element#ApiLevels)

```
public boolean protect (int socket)
```

Protect a socket from VPN connections. After protecting, data sent through this socket will go directly to the underlying network, so its traffic will not be forwarded through the VPN. This method is useful if some connections need to be kept outside of VPN. For example, a VPN tunnel should protect itself if its destination is covered by VPN routes. Otherwise its outgoing packets will be sent back to the VPN interface and cause an infinite loop. This method will fail if the application is not prepared or is revoked.

The socket is NOT closed by this method.

Parameters

socket	int
---------------	------------

Returns

boolean	true on success.
----------------	-------------------------

protect Added in [API level 14](/guide/topics/manifest/uses-sdk-element#ApiLevels) (/guide/topics/manifest/uses-sdk-element#ApiLevels)

```
public boolean protect (DatagramSocket (/reference/java/net/DatagramSocket) socket)
```

Convenience method to protect a [DatagramSocket](/reference/java/net/DatagramSocket) (/reference/java/net/DatagramSocket) from VPN connections.

Parameters

`socket` `DatagramSocket`

Returns

`boolean` `true` on success.

See also:

[protect\(int\)](#) (/reference/android/net/VpnService#protect(int))

setUnderlyingNetworks Added in [API level 22](#) (/guide/topics/manifest/uses-sdk-element#ApiLevels)

```
public boolean setUnderlyingNetworks (Network\[\] (/reference/android/net/Network) networks)
```

Sets the underlying networks used by the VPN for its upstream connections.

Used by the system to know the actual networks that carry traffic for apps affected by this VPN in order to present this information to the user (e.g., via status bar icons).

This method only needs to be called if the VPN has explicitly bound its underlying communications channels — such as the socket(s) passed to [protect\(int\)](#) (/reference/android/net/VpnService#protect(int)) — to a [Network](#) using APIs such as [Network#bindSocket\(Socket\)](#) (/reference/android/net/Network#bindSocket(java.net.Socket)) or [Network#bindSocket\(DatagramSocket\)](#) (/reference/android/net/Network#bindSocket(java.net.DatagramSocket)). The VPN should call this method every time the set of [Networks](#) it is using changes.

`networks` is one of the following:

- **a non-empty array:** an array of one or more [Network](#) (/reference/android/net/Network)s, in decreasing preference order. For example, if this VPN uses both wifi and mobile

(cellular) networks to carry app traffic, but prefers or uses wifi more than mobile, wifi should appear first in the array.

- **an empty array**: a zero-element array, meaning that the VPN has no underlying network connection, and thus, app traffic will not be sent or received.
- **null**: (default) signifies that the VPN uses whatever is the system's default network. I.e., it doesn't use the `bindSocket` or `bindDatagramSocket` APIs mentioned above to send traffic over specific channels.

This call will succeed only if the VPN is currently established. For setting this value when the VPN has not yet been established, see [Builder#setUnderlyingNetworks](#) ([/reference/android/net/VpnService.Builder#setUnderlyingNetworks\(android.net.Network\[\]\)](#)).

Parameters

networks	Network: An array of networks the VPN uses to tunnel traffic to/from its servers.
-----------------	--

Returns

boolean	true on success.
----------------	-------------------------
